

Jin-Gyeong Kim is Research Fellow at System IC Laboratory of LG Electronics Inc. in Korea. His research interests are in DTV SoC architectures, video codec IP, digital broadcasting systems, smart TVs, graphic processors, image and signal processing, IP and SoC verification methodologies, and configurable processors. He has developed many prototype systems, ASICs and SoCs for digital TV and mobile TV since 1992. He received the B.S. degree in electrical engineering from Yonsei University in Korea in 1990, the M.S. degree in electrical engineering from KAIST, Korea in 1992, and the Ph.D. degree in electrical engineering from the University of Southern California, USA in 2003. He designed MPEG-2 video decoder IC for DTV chipset in 1996, developed H.264 decoder IP for the T-DMB SoC, and led several SoC development projects (including T-DMB SoC-2004, DTV SoC for Digital-to-Analog converter box-2006, and SoC for Smart

TV-2010). Currently he is a leader of multimedia IP development team for DTV SoC department.
